Solutions for a Safer World

The SafeNite™ Treatment System

Now your guests can sleep in a clinically safe setting.....

Safe from Allergens

Safe from Superbugs

Safe from Bed Bugs

The ascendancy of antibiotic resistant pathogens such as Bird Flu and Swine Flu, and the threat of cross-contamination fuelled by the ever-increasing popularity of world travel, is causing concern to governments world-wide.

Why allow your guests to be at risk when they can sleep in 99.9% clinically-safe surroundings?

The SafeNite™ Treatment System is a multi-action process designed to provide a pure and healthy sleeping environment. One where your guests can enjoy a perfect nights rest, safe in the knowledge that they are protected from almost everything the bug world can throw at them.

Step One

We start with an exceptionally powerful device which uses the latest multi-cyclonic technology to pulverize mites then extract and capture them within the machine housing. 99.99% of all allergens are captured and contained within the unit.

Step Two

Pressurised dry steam is pumped into bedding components and surrounding fabrics in order to eliminate bacteria, viruses and fungal spores.

Step Three

All soft furnishings are spray treated with a Residual Barrier Technology solution to arrest the production of mites and bacteria post treatment.

Step Four

A gentle, chemical free, purifying mist is diffused into the room leaving the entire area clinically clean - GUARANTEED!

Residual Barrier Technology™

Our infection control treatment process utilises cutting edge Residual Barrier Technology™ to provide ongoing protection from superbugs and everyday germs including MRSA, C.DIFF, E.COLI, Salmonella, Legionnaire's Disease and SARS.

What is Residual Barrier Technology™? In short the capacity to keep the anti-microbial working and protecting week after week.

Normal germ destroying agents stop working once they have dried and bacteria return at an exponential rate. Ours goes on working even when dry.

Whilst stunningly effective, this is an extremely safe professional treatment for long term protection against infections.
