

Safezone

A New Dimension in Flame-proofing...

** Complimentary Cleaning & Stain Protection **

Total Fabric Care

In case you hadn't noticed... Flame-proofing regulations have changed!

Having originally introduced the concept of on-site flame-proofing to the marine sector, Safezone International has cemented its place as the industry leader by becoming the first company to be awarded Approval Status under new MCA directives designed to regulate the supply of in-situ flame-proofing treatments onboard United Kingdom and Red Ensign Group large yachts.

MCA MGN 453...

First published in October 2012, MGN 453 outlines the standards Service Providers must attain in order for the MCA to recognise the flame-proofing certificates they issue.

Prior to its implementation many flame-proofing companies operated without having sufficiently proven the efficacy of their products.

A new system of regulation was needed in order to ensure that in-situ flame-proofing treatments provide a reliable and safe protection by meeting, or demonstrating equivalence to, the appropriate standards of Large Yacht Code and the IMO 2010 Fire Test Procedures (FTP) Code..

Putting safety first...

Under the new regime only those service providers approved in accordance with MCA Procedures may provide in-situ flame-proofing services aboard Large Commercial Yacht Code certified vessels. In addition, a restriction has been placed upon the flame retardant product used in as much as, it can now only be applied to materials of the same construction and material composition as those for which the Company holds test certification. With the latter in mind, when seeking a service provider, it is important to select a company that is not only Approved, but one which holds an extensive range of fire test reports for its products.

Safezone Technology: Ocean's ahead...

Safezone™ flame-proofing technology protects fabrics aboard some of the world's finest yachts. Holding the distinction of having passed more fire tests than any other product currently in use in the marine market, it is true to say that, in terms of efficacy, there is no product more potent than Safezone Pro™.

Leading the fight against fire...

Safezone International is a leader in the field when it comes to in-situ flame-proofing treatments boasting a long history of achievement and a series of industry firsts:

- 2001: First company to carry out in-situ treatments onboard large yachts
- 2006: Top product of the year as voted for by The Yacht Report
- 2007: First company to carry out in-situ treatments aboard Large Yacht Code Certified new-builds
- 2009: First MCA Accredited Supplier
- 2012: First Approved Supplier in accordance with MGN 453

Nowadays, with thousands of successful fabric treatments under our belts, we are recognised as the best by some of the world's most discerning clients; Benetti, Ferretti, Sanlorenzo, Overmarine, Couach and a host of other top companies entrust the flame-proofing of fabrics aboard their new builds to Safezone.

Complimentary Treatments & Price Match Guarantee...

At Safezone, we've never settled for second best. Now, with the introduction of our price match pledge and complimentary treatment programme you don't have to either. You can commission our services safe in the knowledge that you won't find better value anywhere!

Our guarantee... If by chance you find a lower price for a comparable service we will match it. Whatsmore, with no compromise on quality.

We recognise that in tough economic times owners need all the help they can get. With that in mind, we're proud to introduce Total Fabric Care, an all-inclusive treatment package provided at absolutely no extra cost; Cleaning, stain protection and mattress sanitization all included in the price. The ultimate goal... To leave you with nothing but clean, fresh, fire-safe fabrics.

Nothing but clean, fresh, fire-safe fabrics

Why Safezone?

Safezone International has led the way in the marine flame-proofing industry for over a decade. Our expertise in fire protection combined with our in-depth knowledge of marine fire-safety legislation makes us the first port of call for Code compliant flame-proofing.

We are Approved under the new MCA Procedures to offer an in-situ service covering the whole gamut of Large Yacht Code flame-proofing requirements including Hanging Textiles (IMO FTP Code 2010:Part 7), Upholstered Composites (IMO FTP Code 2010:Part 8) and Bedding Components (IMO FTP Code 2010:Part 9).

Each of our treatments is underwritten by certification guaranteeing Large Yacht Code compliance. Our certificates are recognized throughout the industry and accepted by all surveying bodies.

Our revolutionary flame-proofing technology, Safezone Pro™, has been successfully tested across a vast range of fibre types. Its universal constitution means that we require only this one product to carry out a job.

It's important to know...

Not all flame-proofing chemicals are the same. Those with a less advanced technology are usually not universal, and as a result cannot treat all fabric types.

In practice, service providers who utilize the latter category of chemicals need to use a range of products, usually at least one type for natural fabrics and another for man-made fibres. This can prove problematic, especially for existing vessels where it may be some years since materials were first fitted and fabric compositions are usually unknown. In order to overcome the problem, some companies adopt a 'shot in the dark' approach. Others use an onboard 'fabric expert' allegedly capable of clarifying fabric types.

In reality, the only true way to identify a fabrics precise composition is by way of analysis under laboratory conditions.

In circumstances where fabric details are unknown, the safest way to ensure fabrics are truly protected is to call on the services of a service provider whose flame-proofing product is universal, as is the case with Safezone Pro™.
